MITRE / FLUX NOTES **PRE ENCOUNTER CARCINOMA OF BREAST v12.9 (SELECTED CONCEPTS)**

EDWIN CHOI, JUHAN SONIN, 23.FEB.2018

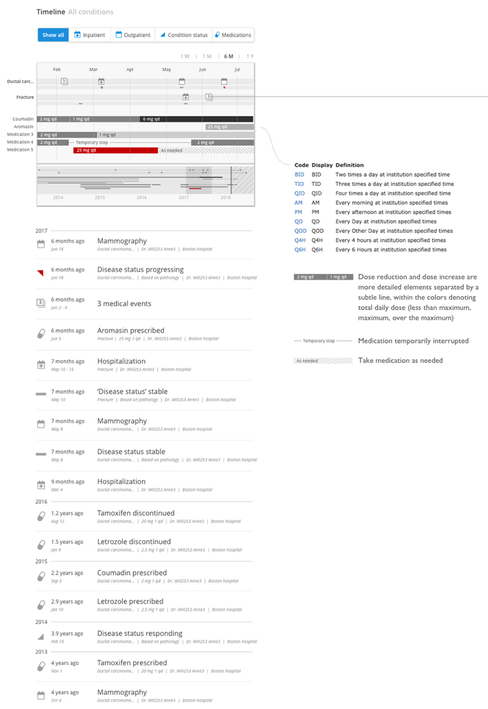
goinvo

The following are selected interface concepts for Flux Notes Full. These concepts continue to be refined based on new feedback and discussion.

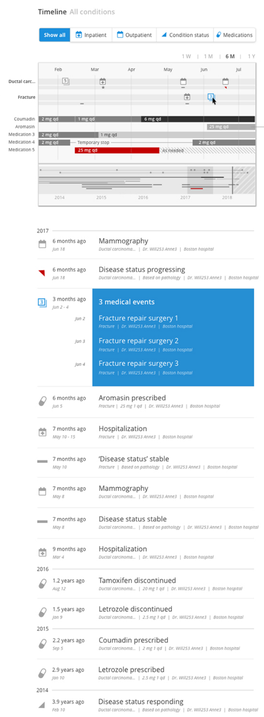
This document also includes concepts for the tabular view of information for certain sections within Flux Notes Full. The tabular views continue to be iterated based on feedback. All concepts require further SME review.

1 FLUX NOTES FULL TIMELINE VIEWS

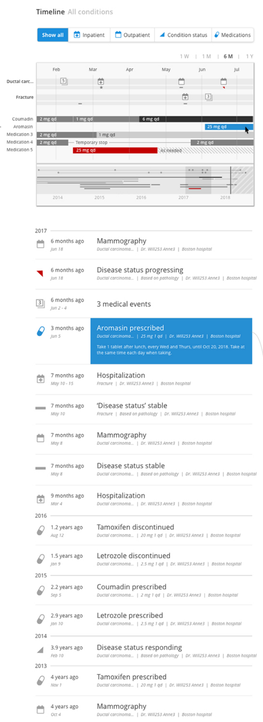
1.1 FLUX NOTES FULL TIMELINE VIEWS



1.2 FLUX NOTES FULL TIMELINE VIEWS



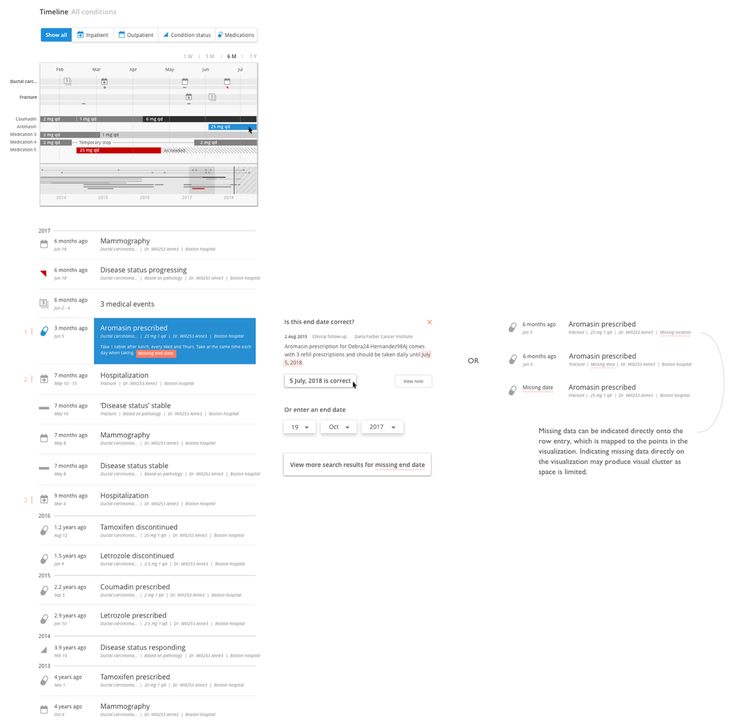
1.3 FLUX NOTES FULL TIMELINE VIEWS



1.4 FLUX NOTES FULL TIMELINE VIEWS

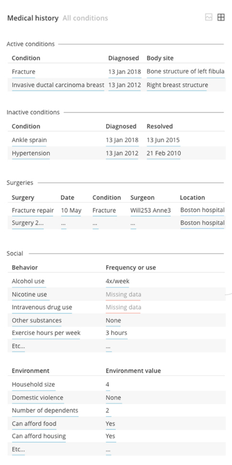
2 MISSING DATA WITHIN VISUALIZATION

2.1 MISSING DATA WITHIN VISUALIZATION

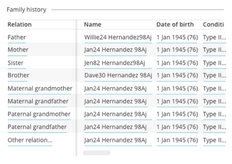


3 FLUX NOTES FULL TABULAR VIEW

3.1 FLUX NOTES FULL TABULAR VIEW

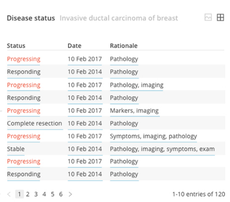


To reduce distraction, text for missing data should be pushed further into the background in the tabular view



First column is fixed. The current width of the content area is based on the ~12 word per line guideline for optimal text length.

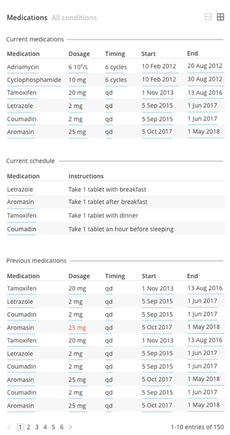
3.2 FLUX NOTES FULL TABULAR VIEW



Pagination will allow the vertical space of the section to remain the same. The number of entries or rows to be shown will depend on clinician needs for each section/ category of information.

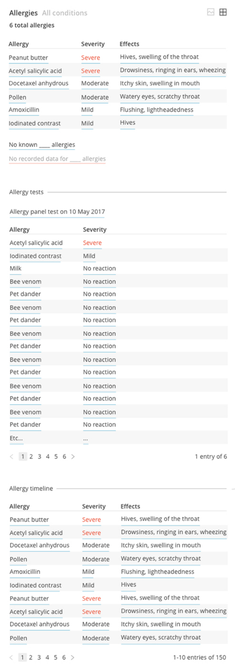
Red text denotes a warning (whether it's a progressing disease status, medication dosage over the maximum, severe allergic reaction, etc), similar to the red used in the visualization modes.

3.3 FLUX NOTES FULL TABULAR VIEW



Not all subsections will require pagination. Some subsections will tend to have fewer rows than others (current medications vs medication timeline for example)

3.4 FLUX NOTES FULL TABULAR VIEW



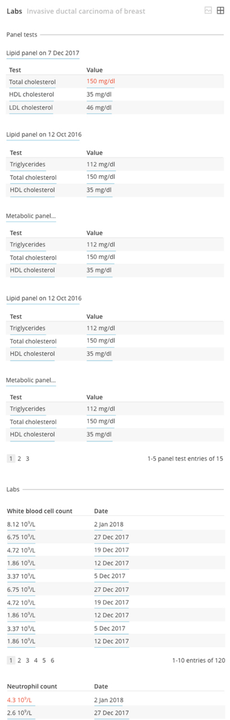
The history of patient allergies is organized by:

Panel tests

Standalone events in which allergies were inadvertently discovered

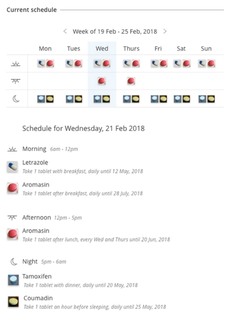
Panel tests can test up to dozens of allergens. There may not be a need to display many of the panel test entries all at once (unlike more frequent tests like blood panels)

3.5 FLUX NOTES FULL TABULAR VIEW



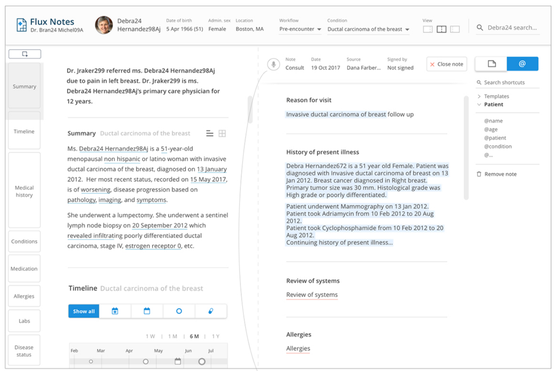
4 MEDICATION SCHEDULE VIEW

4.1 MEDICATION SCHEDULE VIEW



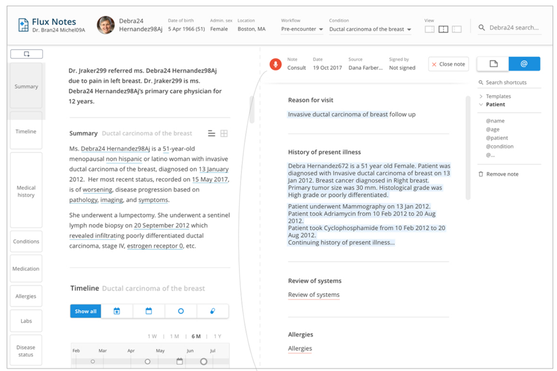
5 NOTE AUTHORING MODE CONCEPTS

5.1 NOTE AUTHORING MODE CONCEPTS



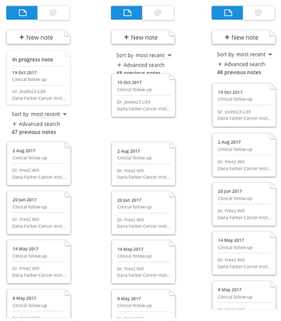
Visual icon denotes that the clinician can begin dictating

5.2 NOTE AUTHORING MODE CONCEPTS



During dictation, the icon turns red (recording) to show that it is listening

5.3 NOTE AUTHORING MODE CONCEPTS



Once a clinical note has been signed, the right context tray returns to showing a list of clinical notes. A quick animation occurs in which the in progress note moves down to the 'previous notes' area to provide a temporary indication that it has in fact been saved in the system.
